

Report: Steps to Create Subtables in Power BI

1. Introduction

The dataset **Sustainable Supply Chain Performance** provides detailed information about supply chain, manufacturing, inventory, and supplier management. It includes the following columns:

- **Product Type SKU**
- **Price**
- **Availability**
- **Number of Products Sold**
- **Revenue Generated**
- **Customer Demography**
- **Stock Levels**
- **Lead Times**
- **Order Quantities**
- **Shipping Time**
- **Shipping Carriers**
- **Shipping Costs**
- **Supplier Name**
- **Location**
- **Transportation Mode**
- **Routes ..etc.**

The goal is to create and organize data into four subtables for efficient analysis:

1. **Supply Chain Table**
2. **Manufacturing Table**
3. **Inventory Table**
4. **Supplier Table**

Each table will focus on specific attributes for a more structured approach.

2. Steps to Create Subtables in Power BI

1. Import the Main Dataset

- Open Power BI.
- Use **Get Data** to import the CSV file **Sustainable Supply Chain Performance**.
- Load the file into Power BI.

2. Duplicate the Main Table

- In Power Query, right-click the imported table and select **Duplicate**.
- Rename each duplicated table as **Supply Chain Table**, **Manufacturing Table**, **Inventory Table**, or **Supplier Table**.

3. Remove Unwanted Columns

- For each duplicated table, use the **Remove Other Columns** option to retain only the columns relevant to that table.
-

3. Subtable Definitions and Contents

Supply Chain Table

- **Purpose:** To focus on supply chain-related data.
- **Columns Included:**
 - Product Type SKU
 - Price
 - Availability
 - Number of Products Sold
 - Revenue Generated
 - Customer Demography
 - Stock Levels
 - Lead Times
 - Order Quantities
 - Shipping Time
 - Shipping Carriers
 - Shipping Costs

- Transportation Mode
- Routes

4. Load Transformed Tables

- After finalizing the columns for each table, click **Close & Apply** in Power Query.
- The subtables are now available in Power BI for further use or analysis.

5. Conclusion

By duplicating the main table and removing unnecessary columns, we created four targeted subtables:

- **Supply Chain Table**
- **Manufacturing Table**
- **Inventory Table**
- **Supplier Table**
